EDUCATION

Loyola Marymount University Los Angeles, CA

Bachelor of Science in Computer Science and Psychology, Cum Laude - GPA: 3.8 *August 2021 - August 2025*

EXPERIENCE

Chip Theory Games, *Systems Engineer* **September 2026 - Present**

- Building a modular project management platform (React, Node.js, MySQL) to centralize cross-departmental workflows across 4 teams; initial rollout reduced proofing material prep time by 40% and task handoffs by 32%.
- Migrating 3 legacy on-prem applications to AWS, re-architecting the system for cloud access while cutting maintenance overhead.

Incredible Dream Studios, *Technology and Automation Engineer* **March 2026 - September 2026**

- Built integration workflows using custom JavaScript, webhooks, and Zapier to link external ticketing tools with core website infrastructure, cutting resolution times by 82% and boosting distribution efficiency by 45%.
- Wrote technical specs, API scoping documentation, and system architecture proposals for executive leadership (CEO, COO, CCO).

DJ League, *Frontend Engineering Intern* **February 2026 - April 2026**

- Developed animated React UI components for real-time competitions using Convex's reactive WebSocket query layer, keeping end-to-end latency under 50 ms across 200+ concurrent connections.
- Handled high-frequency writes in Convex using debounced subscriptions and optimistic UI updates to maintain a smooth 60 FPS render rate.

LMU Psychology Department, *Research Assistant* **August 2023 - August 2025**

- Wrote automated Python data-cleaning scripts to validate survey and test datasets for 300+ participants. Developed 3D simulation tools in Unity (C#) to capture behavioral metrics, opening up scalable data collection for perception research experiments.

PROJECTS

Auto Dev. Env. (ADE) *Qwen2.5-Coder 7B (4-bit) · Ollama · Agentic AI · OpenSSH · VS Code · Dyad* **Aug 2026 – Present**

- Built an autonomous coding agent that writes, tests, and debugs code locally based on user-defined acceptance criteria.
- Deployed a quantized 7B LLM locally via Ollama on an 8GB VRAM / 32GB RAM hardware setup with SSH access for remote dev work.
- Ran the entire physical compute setup off a off-grid 400W solar array and 2000Wh battery rig to bypass cloud compute costs

Fix-It LA (Demo Vision Hack) - *React · Node.js · Python · Gemini Vision API · Vercel v0* **Sep 2026**

- Built an AI-powered civic reporting app using Gemini Vision to classify infrastructure issues from user photos, route them to the correct LA 311 form, and submit tickets directly to the Mayor's Office.
- Scraped the 311 portal with Python to map its form schema, enabling dynamic field generation for different request categories.
- Took 2nd place out of ~20 teams (plus a distinction award for presentation) pitching live to 100+ attendees, including local investors and city representatives.

Glendale Ready (Jewel City Hacks) - *React · Node.js · Firebase · Google Maps API · Cal Fire Data · Vercel* **Sep 2026**

- Awarded 1st place out of 15+ teams as a two-person team building directly for the Glendale Fire Department.
- Created a location-based risk tool overlaying Cal Fire hazard data onto Google Maps to show active threat zones and evacuation routes, incorporating Google Calendar integration for recurring emergency drill reminders.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, C++, C#, SQL **Spoken:** English, Turkish, Spanish

Frameworks & Tools: React, Node.js, Convex, Unity, Firebase, MySQL, Git **Cloud & AI:** AWS, GCP, Ollama, Local LLM Deployment
